

JVC launches eco-friendly dual stream network camera

JVC's new PTZ network dome camera, VN-V685U combines outstanding picture performance with the functionality of networkable video.

The JVC-developed Direct Drive Motor mechanism has reduced power consumption by 30%, enabling the camera to be powered by PoE enhancing the eco-friendliness of JVC's IP cameras. Both power supply and video transmission are covered by a single CAT5 cable, reducing costs for cables, installation and power.

Suitable for applications designed for 24/7 monitoring, JVC Professional continues to push the boundaries to reduce power consumption that affects our environment.
