Description

65" professional full HD, LCD display (landscape)

Ideal for digital signage application with TV-Tools. Full HD resolution, 1080p (1,920 x 1,080 pixels). Multiscreen matrix with combination options of up to 25 (5x5) screens 2x2, 3x3, 4x4 and 5x5. A professional RS-232 serial interface provides monitored 24/7 continuous operation, with up to 50,000 hours typical life for the back-light unit. A black anodised aluminium cabinet provides maximum protection.

Main features

- **Multiscreen matrix**
Ideally suited for impressive graphic displays. Delight your audiences with displays in corridors or life-sized screens in the foyer. A combination of up to 25 (5x5) screens in an image-wall brings about extensive presentation opportunities. The centralised, monitored signal distribution of TV-TOOLS ensures constant picture quality and maximum operating stability.
- **Landscape formats**
Depending on the content to be displayed, the monitors may be installed in horizontal format. The landscape format is ideal for video conferencing and promotions.
- **Full HD imaging at its sharpest**
JVC professional displays provide perfect picture quality in 1,920 x 1,080 full HD resolution. See it to believe
- **ALC (Ambient light control)**
Automatic brightness control operates via a light sensor to ensure optimal adjustment of the image parameters to suit ambient conditions at all times. The advantages are: Optimised legibility in varying light conditions. Energy savings of up to 60%, providing lower TCO (Total cost of ownership). ALC can be switched off to allow manual adjustment.

Additional features

- **Robust metal alloy cabinet very light**
Black anodised aluminium housing with VESA mountings emphasise the high-quality design and build. Light for easy transportation and rapid installation
- **Scheduling function**
With the help of this function the user can set the time of the automatic on and off mode and thereby save energy.
- **Signal detection**
JVC Professional LCD monitors immediately detect and adjust themselves to the incoming signals.
- **Flexible image management**
Images from digital sources can be input through the Picture in Picture (PiP) and Picture by Picture (PbP) functions.
- **Professional RS-232 interface**
All these JVC monitors can be externally controlled via wired serial interface. Using RS-232 protocol means that all widely available remote control systems can be directly interfaced.
