### See all in one page

### **Description**

The TK-C9200E has Auto White Balance which can be applied to a designated area. With this, colour casting can be prevented by setting the white balance within an area while avoiding strong colour zones for best image results.

It also features 3DNR which is the powerful method that improves image quality when footage is taken in the dark. Noise data is detected by comparing some continuous frames and reduced by blending it into other frames over time.

### **Main features**

- High-Resolution of 580 TV Lines
- Super LoLux™ Sensitivity
- Industry-leading S/N Ratio of 52dB

- 3D Noise Reduction
